DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7 are, drawn to a method of producing a vaccine, classified in class 435, subclass 7.2
 - II. Claims 8-11 are, drawn to a vaccine, classified in class 424, subclass 234.1
 - III. Claims 12-13 are, drawn to a method of treating an animal, classified in class 424, subclass 193.1.

2. The inventions are distinct, each from the other because of the following reasons:

Groups I-III are distinct because claims of group I are drawn to a product. Those of groups II-III are drawn to distinct methods.

Inventions II and III are drawn to different methods. The inventions are shown to be distinct because they are drawn to distinct methods, which differ in method objectives, method steps, reagents and material used.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the vaccine of group II can be produced by the inactivating the organisms by formalin.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product

Art Unit: 1645

as claimed can be used in a materially different process of using that product (MPEP

§ 806.05(h)). In the instant case a different vaccine can be used to treat said animal.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. The several inventions above are independent and distinct, each from the other for the reasons stated. They have also acquired a separate status in the art as a separate subject for inventive effect and requires independent searches. The search of each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or make obvious the any of the other groups.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
